Published on 4 December 2018 doi: 10.3310/signal-000687. Living with inflammatory bowel disease as a 'hidden' condition can lead to feelings of isolation and exclusion. These experiences are characterised by exhaustion, feelings of damaged body image, loss of control and living with the fear of complications. The condition can be unpredictable and have a profound impact on quality of life, disrupting social relationships and interactions with the outside world.

inflammatory bowel disease - NHS Evidence

Inflammatory bowel disease (IBD) is a term mainly used to describe 2 conditions: ulcerative colitis and Crohn's disease. Ulcerative colitis and Crohn's disease are long-term conditions that involve inflammation of the gut. Ulcerative colitis only affects the colon (large intestine). Crohn's disease can affect any part of the digestive system ...

inflammatory bowel disease nurse | Evidence search | NICE

There is preliminary evidence of an infectious contribution to inflammatory bowel disease in some patients that may benefit from antibiotic therapy, such as with rifaximin. The evidence for a benefit of rifaximin is mostly limited to Crohn's disease with less convincing evidence supporting use in ulcerative colitis.

Inflammatory bowel disease - Wikipedia

Results Prevalence of ulcerative colitis (UC), Crohn's disease (CD) and inflammatory bowel disease unclassified (IBDU) were 479.72, 265.94 and 35.34 per 100 000 persons, respectively. In 2016, the incidence rates of UC, CD and IBDU were 15.4, 10.7 and 1.4 per 100 000 persons per year, respectively.

Incidence and prevalence of inflammatory bowel disease in ...

Active or severe disease may have prevented some people from responding to surveys and hence the study may have underestimated the effect of IBD on health-adjusted life expectancy.

IBD Passport - Travel Advice for Individuals with IBD

Current evidence suggests the etiology of inflammatory bowel diseases (IBD) involves the confluence of host genetic, environmental, and microbial factors that lead to chronic, and often refractory, disease in susceptible individuals.

The evidence for fungus in Crohn's disease pathogenesis

Limited evidence suggests that isotretinoin may be associated with inflammatory bowel disease (IBD). To explore this association, we conducted a retrospective population-based cohort study in British Columbia, Canada, among participants who were newly treated with isotretinoin or topical acne medications.

Isotretinoin use and the risk of inflammatory bowel ...

The studies provide biochemical 'proof of concept' evidence for the signature underlying PredictSure-IBD. They also provide evidence that the assay can predict severe relapsing Crohn's disease and severe ulcerative colitis in patients with inflammatory bowel disease (IBD).

Clinical and technical evidence | PredictSure-IBD for ...

Inflammatory bowel disease (IBD)-related colorectal cancer (CRC) is responsible for approximately 2% of the annual mortality from CRC overall, but 10-15% of the annual deaths in IBD patients. IBD-related CRC patients are also affected at a younger age than sporadic CRC patients, and have a 5-year survival rate of 50%.

Colorectal cancer in inflammatory bowel disease: review of ...

• In?ammatory bowel disease (IBD) refers to diseases of chronic or remitting/relapsing intestinal in?ammation and includes primarily ulcerative colitis (UC) and Crohn's disease (CD). • UC is a diffuse non-speci?c in?ammatory disease of unknown cause that continuously affects the colonic mucosa proximal from the rectum and often forms
