Spline shafts are mechanical components that provide anti-rotation when functioning as a linear guide or otherwise transmit torque. The splines, grooves, or tongues are machined along the length of the shaft. They mate with a female-splined bore, gear, bearing, or other mating component. They ...

Metric Pinion Gears & Pinion Shafts The term “ pinion gear ” generally refers to the smallest gear in a gear train, which functions as a gear reducer. Any gear with less than twelve teeth may also be considered a pinion gear. We offer precision metric pinion gears, as well as metric pinion shafts, which feature a pinion machined directly into ...

eg. a spline for a 50mm OD spline with say a module of 2mm would have a PCD (D) of  $50 - 2 = 48\text{mm}$ . The number of teeth =  $D/m$  and as an whole number of teeth is required a value of  $D = 48\text{mm}$  is easily selected with number of teeth  $z = 24$  teeth.
