In this section, we will discuss models and applications based on a stochastic

simulation approach introduced by Wilson and Adam [276] into the domain of biomedical optics.

This approach consists in the application of MC methods to simulate

Stochastic

A stochastic simulation is a simulation of a system that has variables that can change stochastically with individual probabilities.

Realizations of these random variables are generated and inserted into a model of the system.

Outputs of the model

Finance With
MATLAB

are recorded, and then the process is repeated with a new set of random values.

These steps are repeated until a sufficient amount of data is gathered. In the end, the distribution of the outputs shows the most probable estimates as well as a frame of
